

# Neurorehabilitation

## VISION

*To ensure people who have sustained an acquired brain injury (ABI) in North West London (NWL) have access to the most appropriate services in a timely manner, improving wellbeing and enabling recovery.*

ICHP reviewed the NWL neuro-rehabilitation landscape to identify system challenges and pressures, and is now working with partners to streamline and improve pathways.

## PROJECT

### Web based referral tool

- Develop electronic tool facilitating referral process from acute wards, inpatient neuro-rehabilitation units and onwards to community services
- Provide standardised time frames for service admission and produce a coherent data set to aid future neuro-rehabilitation service commissioning

### Implementing neuro-navigator role

- Fund and deploy two neuro-navigators, based on the Barnet model which demonstrates value for money and optimised patient experience, to support patient access to appropriate services

## DESCRIPTION OF ACTIVITY

## DESIRED OUTCOMES

- Commissioning recommendations based on historic and prospective data provided locally and by the web based tool
- Reduced transfer of care delays between care settings
- Reduced average inpatient neuro-rehabilitation length of stay
- Reduced time between patient referral and assessment
- Standardised referral paperwork for clinicians
- Increased identification of opportunities to step down care where possible
